REJECTIONS OF CLAIMS BASED ON PRIOR ART

The following is a quotation of the appropriate paragraphs of 35 U.S.C. ' 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claim 6 is rejected under **35 U.S.C. ' 102(b)** as being clearly anticipated by the patent to Laguerre (3,701,192) or Hugues (4,581,006). These patents show slider applying operations wherein sliders are removed from a source and applied to fastener strips already attached bagging web. The claimed "packages" are read on the bag web of the references that will make uop the plurality of packages.

Art Unit 3721

Claim 6 is rejected under **35 U.S.C. ' 102(b)** as being clearly anticipated by the patent to Thomas (5,788,378) or Richardson (5,283,932). These patents show methods wherein packages are formed by forming bags from a web, applying a fastener strip to the bag and finally applying a slider to the fastener. The use of a slider source is inherent in applying the slider to the bags.

The following is a quotation of 35 U.S.C. ' 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6 is rejected under **35 U.S.C. ' 103(a)** as being unpatentable over the patent to Stolmeier (5,564,259) in view of Thieman (5,956,924) or Laguerre (3,701,192). The patent to Stolmeier shows a packaging operation which comprises the formation of packages 22,22' and then the attachment of fastener zippers 18 to the packages. The Stolmeier operation lacks the use of sliders. The patents to Thieman and Laguerre show packaging operations in which the sliders 48 and 13, respectively, are removed

from a source and applied to the zipper fastener already attached to a bag web. It would have been obvious to one skilled in the art to provide sliders to the fasteners of Stolmeier as shown by the patents to Thieman or Laguerre to provide an opening aid for the consumer.
